

# SWIFT B200

Go-To Bluetooth Reader

EMV Chip Cards | Magnetic Stripe Payments

## Bluetooth Low Energy

Eliminate audio jack connectivity issues with Bluetooth Low Energy. Accept payments on most iOS and Android smartphone or tablets.

## EMV Quick Chip

Help your merchants optimize and speed up the checkout process with EMV Quick Chip technology. Reduce fraudulent chargebacks and transaction wait times.

## Lightweight & Compact

A mobile and convenient pocket-sized card reader that enables your merchant to accept easy and secure payments anytime, anywhere.

## Types of Merchants the Swift B200 is Best Suited for:

- Merchants seeking a low cost card reader solution that can accept mag stripe and EMV chip card payments over a Bluetooth connection.
- Merchants that don't want to use an audio jack device like the Eclipse A200 because they:
  - Don't have an audio jack at all, and don't want to use an adapter cable.
  - Have a heavy case on their device which prevents easy access to the audio jack connection.
  - Have a device that only has one-way audio jack capability or software incompatibility.
- Merchants who would like to shorten overall checkout times through the use of Quick Chip technology.
